Wind Energy Supplier Development

There is a lot of energy in the wind-energy industry and it's not Hot Air. The wind energy industry is rapidly growing, and the US government is accelerating that growth with incentives and grants. According to the Advanced Energy Initiative AEI "areas with good wind resources have the potential to supply up to 20% of the electricity consumption of the United States." [Read More..](#)

The WindPower 2009 Expo/Conference in Chicago (May 4-7) was huge, and more expos are popping up everywhere in 2009 and 2010.

ESC is offering a supplier development program to help them get ready. [Read More..](#)

Many suppliers want to expand into the wind energy industry. To be able to do that, they need to make changes and upgrades in several areas. ESC -in cooperation with TQS- is offering a supplier development program to help them get ready. The program includes training and assistance in wind-energy product development process, OEM requirements, governmental regulations, and quality standards. If you are interested in the program please call us or send email to info@pdexcellence.com

What's New?

Wind industry will provide a significant portion of the US

alternative energy target. Automotive industry continues to shed its extra capacity and high cost structures. Orthopedics and Medical Devices industries continue to grow!!

Best regards

Sam Wakeel

Success Stories

Data-Driven Strategic Decisions - Our client is a manufacturer of trucks that are used in construction throughout the US. They were faced with anomalies in axle durability where few of their customers had issues of premature wear. The client needed to conduct a simulation of stresses and fatigue life of components involved. We provided a detailed modeling and analysis of the components under several driving conditions. We also analyzed stresses and fatigue life. The analyzes enabled the client to make data-driven supplier negotiation and design changes.

Effective training for Small medical devices company based in the US that is developing advanced technologies for several medical applications. We will be conducting product development training and project plan improvement workshop. Future product development excellence initiatives may include building-up the full R&D organization and corresponding product development process.

Technical Assistance - A startup manufacturing company that will serve several industries. We are acting as a product development advisor.

Business Process Optimization - We will be conducting a business process reengineering and optimization for a dairy products development and manufacturing company. The scope includes setting metrics/KPIs and improving performance for several departments: Finance, Marketing, Operations, R&D, Distribution, HR, Customer Support, Purchasing, and Maintenance.

Low-cost NPD & Innovation Training

If you are on a tight budget and want to improve your product development organization's performance, join our training - which will put you on the right track!

The one-day "Product Development: Introduction" workshops were a great success in 2008. Two workshops are coming up in June. However, they are expanded into two days and will include a mini "Innovation" workshop.

Attendees will learn how to: Reduce re-work within their product development activities, reduce product launch delays, and effectively manage PD organization or activities.
